

Designer

Plug-In for AutoDesk® Revit®

Extend the functionality of your existing Revit® software with the AQD Plug-In for AutoDesk® Revit®, an efficient and powerful commercial kitchen design solution.

With the AQD Plug-In for AutoDesk® Revit® you can:

Seamlessly integrate your Revit designs with AQ projects and product information.

You can automatically populate your design with Revit families from AQ. You'll eliminate tedious, one-at-a-time importing of models into your Revit design.

Access more than 50,000 Revit families available for automatic import from within AQ.

Revit families connect to product specs and mechanical, electrical and plumbing (MEP) data in your AQ Project, so your designs are accurate and up-to-date.

Receive visual alerts when changes are made to either your AQ project or Revit design.

Know that your quote and design are in sync with visual alerts. Making changes in AQ or the Revit software sends a change notice to the other.

Note: AQ Designer Plug-In for AutoDesk® Revit® requires an active AQ and Revit® license. It is not compatible with Revit LT™.

Design Solutions

AQ Design Solutions is a powerful commercial kitchen design suite created by AutoQuotes specifically for the foodservice industry.
